

Vontobel Fund – mtX Emerging Markets Leaders ex China

Marketing document for institutional investors in: AT, CH, DE, DK, ES, FI, FR, GB, IT, LU, NL, NO, SE.

Investors in France should note that, relative to the expectations of the **Autorité des Marchés Financiers**, this fund presents disproportionate communication on the consideration of non-financial criteria in its investment policy.

Summary

- Following a strong second-quarter advance, emerging market equities consolidated in June, with the MSCI EM ex China Index broadly unchanged (0.0%), outperforming both the MSCI EM Index (-1.4%) and the MSCI World Index (-0.6%).
- The mtX Emerging Markets Leaders ex China (EMLX) fund returned +0.2% (gross of fees) during June 2026.
- The mtX EMLX fund outperformed the benchmark by 3.4% (gross of fees) during the first half of 2026.

Market developments

The MSCI EM ex China Index was broadly unchanged in June, outperforming the broader MSCI EM Index, which declined 1.5% amid weakness in Chinese equities. Despite the flat monthly performance, emerging markets ex China ended the quarter with strong gains, supported by robust performance in technology-heavy markets such as Taiwan and Korea, as well as continued resilience in India.

Risk appetite remained broadly constructive, with both emerging market and US equities reaching fresh all-time highs during the month, supported by continued enthusiasm around AI and technology-related stocks. However, concerns over increasingly stretched valuations among large-cap technology names triggered bouts of volatility and ultimately weighed on market performance. Korean equities experienced particularly sharp swings, reflecting technical pressures associated with sizeable outstanding leveraged ETF positions.

Performance across EM ex China markets was mixed. South Africa (-6.8%), Mexico (-3.1%), Brazil (-2.9%) and Saudi Arabia (-2.7%) were among the weakest performers, while India (+1.5%) and Taiwan (+1.4%) delivered positive returns, supported by resilient domestic fundamentals and continued investor demand for technology exposure. Korea was broadly flat (+0.1%) despite heightened volatility. The positive performance in India and Taiwan largely offset weakness elsewhere, resulting in a flat return for the MSCI EM ex China Index during the month.

Sector performance within emerging markets ex China was mixed. Information technology (+1.7%) and financials (+3.8%) were the strongest-performing sectors, supported by continued AI-related optimism and resilient earnings expectations. Health care (+2.8%), real estate (+1.5%) and utilities (-0.7%) were broadly resilient. At the other end of the spectrum, communication services (-2.2%) and consumer staples (-1.3%) lagged, while cyclical sectors remained under pressure. Energy (-6.4%) was the weakest-performing sector as oil prices fell sharply during the month, followed by consumer discretionary (-10.9%), materials (-9.4%) and industrials (-1.7%), reflecting weaker commodity prices and softer cyclical expectation.

Against this backdrop, geopolitical developments provided some relief to markets. A memorandum of understanding between Iran and the United States extended the ceasefire by 60 days and paved the way for the reopening of the Strait of Hormuz. While

negotiations on a comprehensive agreement remain ongoing, the truce significantly reduced immediate concerns over energy supply disruptions. Implementation risks, policy miscalculations, and the potential for renewed escalation remain key tail risks, although shipping activity through the Strait has gradually normalized despite sporadic clashes.

Commodity markets reacted sharply to the easing in geopolitical tensions, with both Brent and WTI crude oil prices falling by more than 20% during the month. Meanwhile, a stronger US dollar weighed on the outlook for a broader cyclical recovery, with the JPMorgan Broad Dollar Index rising 2.0% and the DXY gaining 2.3%, while EM currencies declined 2.3%. Adding to the more cautious market backdrop, the June FOMC meeting delivered a more hawkish-than-expected message, reinforcing expectations that US monetary policy could remain restrictive for longer than previously anticipated.

Portfolio review

The mtX Emerging Markets Leaders ex China strategy modestly outperformed (+0.3%) the benchmark in June, with positive allocation effects largely offset by mixed stock-selection outcomes. At the country level, South Korea was the largest contributor to relative performance, driven by successful stock selection within technology and semiconductor-related holdings. Positive contributions also came from Peru, Hungary, India, and Colombia. Conversely, Taiwan was the largest detractor, reflecting weakness across several information technology holdings. Positions in South Africa, Brazil, Mexico, and Argentina also weighed on relative returns. From a sector perspective, stock selection in information technology and financials contributed positively to performance. Key contributors included SK Hynix, HDFC Bank, OTP Bank, Credicorp, Aldar Properties, and Elite Material. These gains were partially offset by weakness in Wiwynn, SK Square, Kia Corp, Naver, Grupo Mexico, and Prio. Consumer-related holdings and selected commodity exposures also detracted amid weaker commodity prices and heightened market volatility.

Allocation effects were positive overall and supported relative returns. The portfolio benefited from underweight exposure to several weak-performing benchmark markets, including Saudi Arabia, Poland, Australia, and South Africa, while overweight positions in Peru and Hungary added value. These gains were partially offset by underweights in Korea and India.

At the end of June, the portfolio consisted of 41 companies across 43 holdings, reflecting dual share-class positions in Localiza and Samsung Electronics. During the month, we initiated two new positions and fully exited one holding. New investments included Credicorp (financials, Peru), and SK Square (industrials, South Korea). These additions were funded through the sale of Bank Mandiri (financials, Indonesia), as we continued to reallocate capital towards our highest-conviction opportunities.

Performance analysis

June highlighted a sharp divergence across the portfolio. Holdings exposed to the AI infrastructure, semiconductor, and data-centre supply chains delivered strong gains, while selected cyclical, commodity, and internet-related holdings faced headwinds from weaker commodity prices, valuation concerns, and broader market volatility.

The strongest contributors were Credicorp (+19.0%), SK Hynix (+10.5%), HDFC Bank (+9.4%), OTP Bank (+7.7%), and Aldar Properties (+6.2%). Credicorp benefited from strong momentum in Peruvian equities, while OTP Bank continued to outperform on the back of improving profitability and robust earnings expectations. SK Hynix remained a key beneficiary of the ongoing AI investment cycle, supported by continued strength in demand for advanced memory solutions.

On the downside, Prio (-18.1%), Kia Corp (-20.7%), Naver (-17.3%), Wiwynn (-13.8%), and Grupo Mexico (-8.6%) were among the main detractors from performance. Weakness was concentrated in selected technology hardware, internet, automotive, and commodity-related holdings.

Overall, performance reflected the portfolio's emphasis on high-quality growth companies across technology and financials. Strong gains from semiconductor and banking holdings were partly offset by weakness in selected Taiwanese, Korean, and Latin American positions.

Outlook

The outlook for emerging market equities remains constructive, supported by resilient economic growth, strong earnings momentum and attractive relative valuations. Consensus expects EM earnings to grow by roughly 35% in 2026, well ahead of developed markets, reinforcing the region's long-standing growth advantage.

Fundamentals remain supportive, particularly in North Asia, where profitability continues to improve. Technology, especially semi-

conductors and AI-related supply chains, remains the key earnings driver, with Korea and Taiwan expected to remain at the forefront of earnings growth across emerging markets. While earnings remain concentrated in a relatively narrow set of sectors, the overall outlook for corporate profits remains robust.

Valuations continue to be appealing on a relative basis. The MSCI EM Index trades at roughly 13.5x forward earnings, representing a significant discount to both developed and US equities. Although higher inflation and tighter financial conditions may limit scope for near-term multiple expansion, high-quality companies with strong profitability characteristics continue to offer attractive opportunities.

The macroeconomic backdrop is broadly supportive. EM economies are expected to grow around 4% in 2026, comfortably ahead of developed markets. While inflation remains elevated and central banks have become somewhat more cautious, the environment is best characterized as one of resilient growth rather than stagflation. Oil prices have stabilized following the geopolitical volatility seen earlier in the year, reducing the likelihood of extreme downside outcomes.

The main risks to the outlook stem from a potential slowdown in AI-related capital expenditure, renewed energy market disruptions, tighter-than-expected US monetary policy, and weaker global growth. Nevertheless, given the combination of superior earnings growth, improving profitability and attractive valuations, we remain constructive on the medium-term outlook for emerging market equities.

The AI capex cycle remains the single most important swing factor for EM equities heading into Q3, with Korea and Taiwan acutely exposed to any deceleration in hyperscaler spending. The base case remains constructive, supported by continued commitments to AI infrastructure spending and healthy demand trends across the semiconductor value chain. However, the risk of a capex pause remains non-trivial, particularly if tighter financial conditions or slower AI monetization were to affect investment plans.

Trade policy also represents a growing source of uncertainty. New tariff measures, including proposals that could raise tariffs on certain countries such as Brazil, have the potential to disrupt global trade flows and weigh on export-oriented EM markets. Finally, earnings risks remain relevant, as historical patterns indicate that downward revisions tend to lag energy shocks by approximately two to three quarters, suggesting potential pressure on estimates later in the year.

Performance data does not take into account any commissions and costs charged when shares of the fund are issued and redeemed, if applicable. The return of the fund may go down as well as up, e.g. due to changes in rates of exchange between currencies. The value of the money invested in the fund can increase or decrease and there is no guarantee that all or part of your invested capital can be redeemed.

Investment risks

- Investments in emerging markets entail increased liquidity and operational risks as these markets tend to be underdeveloped and more exposed to political, legal, tax and foreign exchange control risks.
- Using derivatives generally creates leverage and entails valuation risks and operational risks. Leverage magnifies gains but also losses. Over-the-counter derivatives involve corresponding counterparty risks.
- The sub-fund also includes sustainability criteria in its investment process. This may mean that the sub-fund's performance is more positive or negative than a conventionally managed portfolio.
- A company's stock price may be adversely affected by changes in the company, its industry or economic environment and prices can change quickly. Equities typically involve higher risks than bonds and money market instruments.
- The sub-fund's investments may be subject to sustainability risks. The sustainability risks that the sub-fund may be subject to are likely to have an immaterial impact on the value of the sub-fund's investments in the medium to long term due to the mitigating nature of the sub-fund's ESG approach. The sub-fund's performance may be positively or negatively affected by its sustainability strategy. The ability to meet social or environmental objectives might be affected by incomplete or inaccurate data from third-party providers. Information on how environmental and social objectives are achieved and how sustainability risks are managed in this sub-fund may be obtained from vontobel.com/sfdr.

Important legal information

This marketing document was produced by one or more companies of the Vontobel Group (collectively "Vontobel") for institutional clients, for distribution in AT, CH, DE, DK, ES, FI, FR, GB, IT, LU, NL, NO, SE.

This document is for information purposes only and does not constitute an offer, solicitation or recommendation to buy or sell shares of the fund/fund units or any investment instruments, to effect any transactions or to conclude any legal act of any kind whatsoever. Subscriptions of shares of the fund should in any event be made solely on the basis of the fund's current sales prospectus (the "Sales Prospectus"), the Key (Investor) Information Document ("KIID"), its articles of incorporation and the most recent annual and semi-annual report of the fund and after seeking the advice of an independent finance, legal, accounting and tax specialist. This document is directed only at recipients who are institutional clients, such as eligible counterparties or professional clients as defined by the Markets in Financial Instruments Directive 2014/65/EC ("MiFID") or similar regulations in other jurisdictions, or as qualified investors as defined by Switzerland's Collective Investment Schemes Act ("CISA").

Neither the fund, nor the Management Company nor the Investment Manager make any representation or warranty, express or implied, with respect to the fairness, correctness, accuracy, reasonableness or completeness of an assessment of ESG research and the correct execution of the ESG strategy. As investors may have different views regarding what constitutes sustainable investing or a sustainable investment, the fund may invest in issuers that do not reflect the beliefs and values of any specific investor. ESG investing and criteria employed may be subjective in nature. The considerations assessed as part of ESG processes may vary across types of investments and issuers and not every factor may be identified or considered for all investments. Information used to evaluate ESG components may vary across providers and issuers as ESG is not a uniformly defined characteristic. ESG investing may forego market opportunities available to strategies which do not utilize such criteria. There is no guarantee the criteria and techniques employed will be successful. Note: Unless otherwise stated in Fund documentation or included within the Fund's investment objective, information herein does not imply that the Fund has an ESG-aligned investment objective, but rather describes how ESG criteria and factors are considered as part of the overall investment process.
