Vontobel Fund – mtX Emerging Markets Leaders ex China

Marketing document for institutional investors in: AT, CH, DE, ES, FI, FR, GB, IT, LU, NL, NO, SE.

Summary

- Emerging markets ex China equities returned +1.2% for September.
- The mtX Emerging Markets Leaders ex China (EMLX) fund was flat (gross of fees) in September.
- The EMLX fund underperformed the benchmark by -3.8% (gross of fees) during the nine months to the end of September.

Market developments

After starting the month in negative territory, emerging-market (EM) equities rebounded to track just above +1% higher, spurred by an unexpected wave of stimulus measures from Chinese authorities aimed at boosting the world's second-largest economy. The initial announcement focused on reducing the main policy rate, cutting existing mortgage rates by 0.5%, lowering the down payment requirement ratio for homebuyers from 25% to 15%, and injecting additional funds into local stock markets. Further market optimism was driven by the subsequent Politburo meeting, where officials reviewed the country's economic situation and discussed key policies to achieve its annual economic goals.

The market reaction to this renewed determination was decisive, with the MSCI China Index jumping almost +24% for the month (China A onshore equities were also up approx. +23% for the month). This exceptional performance helped propel the MSCI EM Net Return Index to +6.7% for the month, almost +5% higher than developed-market (DM) equities. Given the extraordinary rebound from Chinese equities, it is unsurprising that the MSCI EM ex China 10/40 Index lagged behind for the month, returning +1.2%.

Within the EM ex China 10/40 Index, all sectors finished the month in positive territory with the exception of energy and information technology/IT. The best performing sectors for the month were materials, consumer discretionary and utilities. From a country perspective, Thailand and South Africa were two of the best performers for the month. On the negative side, South Korea and Brazil were among the worst performers for the month.

Portfolio review

Over the course of the month, the strategy was flat (gross of fees), underperforming the benchmark return by -1.2%. Negative stock selection was the key driver of this underperformance, particularly within information technology/IT and financials. Allocation impact was also negative for the month, primarily due to the overweight position to IT and underweight position to materials. From a country perspective, stock selection in South Korea and Taiwan were among the largest detractors for the month.

At the end of September, our portfolio comprised of 38 companies (41 holdings, two holdings each for HDFC Bank, Infosys and TSMC). During the month, we sold our position in Hypera (health care, Brazil).

Some of the salient points for performance in September are summarized below.

Performance analysis

IT: The portfolio's IT holdings had a difficult month, in particular Samsung Electronics was the biggest detractor to performance, with the stock down around -15% for the month. While our view remains that Samsung is making good progress on its high bandwidth memory (HBM) solutions and could play catch up with its major competitor, SK Hynix, ongoing delays in official Nvidia qualification and recent weakness in the DRAM spot price (driven by higher smartphone and PC inventories) heaped more pressure on the stock during the month. Given the weakening DRAM spot price and concerns regarding demand, we started to reduce our position. However, we believe the market's reaction has been excessive and for this reason we decided not to reduce any further.

Elsewhere within IT, Lotes and Wiwynn Corp both had a difficult month and help explain the portfolio's negative stock selection in Taiwan. In the case of Lotes, the stock struggled on the back of delays to Nvidia's Blackwell architecture for data-centers, which many in the market believe could provide an opening for Lotes' competitors when it comes to liquid cooling solutions. In addition, the market readjusted down the expected selling prices for Lotes solution in this space. We have always maintained a conservative approach to the impact on Lotes' earnings as a result of its liquid cooling solution, nevertheless, we did reduce our position in the stock in favor of higher conviction ideas elsewhere.

Consumer discretionary: On the positive side, the portfolio's consumer discretionary holdings had a strong month. This is a result of our holdings in Naspers (South Africa) and Bajaj Auto (India). Naspers benefitted from its holding in Tencent, which rose almost +17% for the month on the back of the Chinese stimulus announcement. In the case of Bajaj Auto, the stock continued its strong momentum into September as the company continues to benefit from strong demand momentum given that two-wheeler bikes are the fastest growing segment

For institutional investors only/not for public viewing or distribution

within Autos in India. Bajaj is expecting to grow faster than the market with its compressed natural gas motorcycles also starting to gain traction.

Outlook

The official start of the easing cycle in the US and a show of determination from the Chinese authorities to reinflate the world's second largest economy, have combined to provide EM equities with a welcome boost. While challenges lie ahead, expected earnings growth for EM corporates remains solid, relative valuations continue to look appealing and the gap between real GDP growth in the emerging and developed world is expected to widen.

Operations

EM corporates are estimated to post solid earnings growth of +16 in 2024, which compares very favorably with earnings growth expectations in the developed world of +13%. From a regional perspective, earnings growth in EM Asia is predicted to be among the strongest with South Korea (+30%) and Taiwan (+17%) standing out as particularly strong given the reacceleration in earnings for leading technology companies in these countries. India, the largest country in the index by market cap, is also expected to generate good earnings growth in 2024 of +15%. Elsewhere within EM, earnings expectations have notably picked up in South Africa post the general election, with expectations of +24% earnings growth in 2024.

Looking ahead to 2025, earnings growth for EM corporates is expected to remain strong, with projections of +11%. This continues to compare favorably with forecasts for both the US (+13%) and DM (+11%). EM Asia stands out as attractive, with Taiwan predicted to deliver earnings growth of +16%.

Profitability margins, such as return on equity, held up reasonably well in 2023 for the average company in the MSCI EM ex China Index (c.11.2%). In a similar picture to what we see for earnings, margins are expected to increase in 2024 with consensus expectations around +11.9% for the year.

Momentum

Over the past three months, analyst earnings expectations for EM corporates have increased for 2024 by +0.7%. This contrasts with the developed world where earnings expectations were revised upwards by +1.1%.

Within EM, Taiwan (+1.8%), South Korea (+1.6%) and Mexico (+1.2%) were among the largest positive revisions during the past three months.

Valuation

Despite the strong performance during the third quarter, EM ex China equities continue to look relatively attractive compared to developed market equities, with 2024 earnings trading on a multiple of 15.2x and 2025 earnings trading at 12.9x. In comparison, developed market equities are trading at 20.6x for 2024 earnings and 18.3x for 2025 earnings.

On a Shiller P/E basis (the cyclically adjusted price to earnings ratio that adjusts 10 years of earnings for inflation), EM equities continue to trade at a significant discount to DM equities. We believe this is a powerful signal that long-term investors should consider.

From a regional perspective, Latin America (LatAm) continues

to screen as very good value with markets such as Brazil trading at 8.6x for 2024 earnings. Within EM Asia, South Korea continues to stand out as relatively attractive trading at 10.2x for 2024 earnings, while India continues to look very expensive trading at 26.9x for 2024 earnings.

Growth

Real gross domestic product (GDP) expectations for EM economies are strong with consensus estimating that EM economies will grow by +3.9% in 2024 and +4.3% in 2025. In comparison, expected real GDP growth in the developed world is +1.7% in both 2024 and 2025.

The biggest growth in real GDP expectations for 2024 continues to come from EM Asia with economies such as India (+6.9%), Indonesia (+5%) and China (+4.8%) expected to grow the fastest. This trend is expected to continue into 2025 with India once again predicted to be one of the fastest growing economies in the world at +6.6%.

Elsewhere within EM, we note strong real GDP growth expectations in the Middle East for 2025 with economies such as Saudi Arabia and the United Arab Emirates (UAE) both expected to grow by approx. +4.5%. LatAm economies are still predicted to experience subdued growth in 2025, with Brazil and Mexico only expected to grow by +2% and +1.6% respectively.

Risk

Red or blue? The US presidential election in November is likely to have a major impact on investor sentiment towards EM equities in the final quarter of the year. A potential return of Donald Trump to the White House is generally viewed as negative for EM equities, particularly due to his stance on hiking tariffs on Chinese imports.

EM performance during US easing cycles: Although a weaker US dollar is typically considered favorable for EM equities, it is not guaranteed that the current easing cycle in the US will benefit EM performance. Historical events, such as the global financial crisis, have shown that some previous easing cycles did not result in EM equity outperformance.

Hard or soft landing? A hard landing for the US economy would likely have a negative impact on EM corporate earnings. While the US economy appears to be slowing yet resilient, the delayed effects of monetary policy mean that a recession remains possible. The key question is the extent of this potential slowdown.

Goodbye inflation? While the US has officially entered its easing cycle, there battle against inflation may not yet won. A Trump victory could lead to substantial hikes in tariffs on imports, which could be inflationary.

Flows

EM equity flows have been negative year-to-date, with JP Morgan estimating outflows of approx. -\$21 billion as of September 26, 2024.

The average global investor's allocation to EM equities remains significantly underweight, with JP Morgan data suggesting it is 2-3% lower than the long-term average EM allocation.

Fund characteristics

Past performance is not a reliable indicator of current or future performance. Performance data does not consider any commissions and costs charged when shares of the fund are issued and redeemed, if applicable. The return of the fund may go down as well as up due to changes in the rates of exchange between currencies.

Investment risks

- Investments in emerging markets entail increased liquidity and operational risks as these markets tend to be underdeveloped and more exposed to political, legal, tax and foreign exchange control risks.
- Using derivatives generally creates leverage and entails valuation risks and operational risks. Leverage magnifies gains but also losses. Over-the-counter derivatives involve corresponding counterparty risks.
- The sub-fund also includes sustainability criteria in its investment process. This may mean that the sub-fund's performance is more positive or negative than a conventionally managed portfolio.
- A company's stock price may be adversely affected by changes in the company, its industry or economic environment and prices can change quickly. Equities typically involve higher risks than bonds and money market instruments.
- The sub-fund's investments may be subject to sustainability risks. The sustainability risks that the sub-fund may be subject to are likely to have an immaterial impact on the value of the sub-funds' investments in the medium to long term due to the mitigating nature of the sub-fund's ESG approach. The sub-funds' performance may be positively or negatively affected by its sustainability strategy. The ability to meet social or environmental objectives might be affected by incomplete or inaccurate data from third-party providers. Information on how environmental and social objectives are achieved and how sustainability risks are managed in this sub-fund may be obtained from vontobel.com/sfdr.

Important legal information

This marketing document was produced by one or more companies of the Vontobel Group (collectively "Vontobel") for institutional clients, for distribution in AT, CH, DE, ES, FI, FR, GB, IT, LU, NL, NO, SE.

This document is for information purposes only and does not constitute an offer, solicitation or recommendation to buy or sell shares of the fund/fund units or any investment instruments, to effect any transactions or to conclude any legal act of any kind whatsoever. Subscriptions of shares of the fund should in any event be made solely on the basis of the fund's current sales prospectus (the "Sales Prospectus"), the Key (Investor) Information

Document ("K(I)ID"), its articles of incorporation and the most recent annual and semi-annual report of the fund and after seeking the advice of an independent finance, legal, accounting and tax specialist. This document is directed only at recipients who are "institutional clients", such as eligible counterparties or "professional clients" as defined by the Markets in Financial Instruments Directive 2014/65/EC ("MiFID") or similar regulations in other jurisdictions, or as "qualified investors" as defined by Switzerland's Collective Investment Schemes Act ("CISA").

Neither the fund, nor the Management Company nor the Investment Manager make any representation or warranty, express or implied, with respect to the fairness, correctness, accuracy, reasonableness or completeness of an assessment of ESG research

and the correct execution of the ESG strategy. As investors may have different views regarding what constitutes sustainable investing or a sustainable investment, the fund may invest in issuers that do not reflect the beliefs and values of any specific investor.

Past performance is not a reliable indicator of current or future performance.

Performance data does not consider any commissions and costs charged when shares of the fund are issued and redeemed, if applicable. The return of the fund may go down as well as up, e.g. due to changes in rates of exchange between currencies. The value of the money invested in the fund can increase or decrease and there is no guarantee that all or part of your invested capital can be redeemed.
