

Vontobel Fund - TwentyFour Absolute Return Credit Fund HN (hedged)

Approved for Wholesale/Retail investors in: CH

Investment objective

This bond fund aims to achieve a positive absolute return over a period of three years by keeping a modest level of volatility, while respecting risk diversification.

Key features

The fund can invest worldwide, with a focus on Europe, in corporate bonds and similar fixed-interest and floating-rate securities in various currencies of diverse issuers of good quality (investment grade). The fund can use derivative financial instruments for hedging purposes.

Approach

The experienced and diverse investment team takes high-conviction decisions based on rigorous macro-economic, technical and issuer analyses. In line with their continuous assessment of market conditions and future developments, the team allocates interest-rate and credit risks with the aim to benefit from any market environment. They select those securities and instruments within the investment universe in which they see the most rewarding yield and/or hedging values. The team actively adapts the portfolio to invest in attractive opportunities whenever they occur while keeping risks under control.

Regional Exposure

Calculated on a direct exposure

Source: TwentyFour Asset Management LLP, 29/01/2021

Opportunities

- + Broad diversification across numerous securities
- + Investments in foreign currencies might generate currency gains
- + Possible extra returns through single security analysis and active management
- + Gains on invested capital possible
- + Use of derivatives for hedging purposes may increase subfund's performance and enhance returns
- + Bond investments offer interest income and capital gains opportunities on declining market yields
- + Investments in bonds with non-investment grade rating may offer an above-average yield compared with investments in first-class borrowers

Risks

- It cannot be guaranteed that the investor will recover the capital invested
- Limited participation in potential of single securities
- Investments in foreign currencies are subject to currency fluctuations
- Success of single security analysis and active management cannot be guaranteed
- Derivatives entail risks relating to liquidity, leverage and credit fluctuations, illiquidity and volatility.
- Interest rates may vary, bonds suffer price declines on rising interest rates.
- High-yield bonds (non-investment-grade bonds/junk bonds) may be subject to greater market fluctuations, risk of default or loss of income and principal than higher-rated bonds.

Important legal information:

This marketing document was produced for Wholesale/Retail clients, for distribution in: CH.

This document is for information purposes only and does not constitute an offer, solicitation or recommendation to buy or sell shares of the fund/fund units or any investment instruments, to effect any transactions or to conclude any legal act of any kind whatsoever. Subscriptions of shares of the fund should in any event be made solely on the basis of the fund's current sales prospectus (the "Sales Prospectus"), the Key Investor Information Document («KIID»), its articles of incorporation and the most recent annual and semi-annual report of the fund and after seeking the advice of an independent finance, legal, accounting and tax specialist. Furthermore and before entering into an agreement in respect of an investment referred to in this document, you should consult your own professional and/or investment advisers as to its suitability for you.

In particular, we wish to draw your attention to the following risks: Investments in the securities of emerging- market countries may exhibit considerable price volatility and – in addition to the unpredictable social, political and economic environment – may also be subject to general operating and regulatory conditions that differ from the standards commonly found in industrialised countries. The currencies of emerging-market countries may exhibit wider fluctuations. Investments in riskier, higher-yielding bonds are generally considered to be more speculative in nature. These bonds carry a higher credit risk and their prices are more volatile than bonds with superior credit ratings. There is also a greater risk of losing the original investment and the associated income payments. Investments in derivatives are often exposed to the risks associated with the underlying markets or financial instruments, as well as issuer risks. Derivatives tend to carry more risk than direct investments. There is no guarantee that all sustainability criteria will always be met for every investment. Negative impact on subfund's performance possible due to pursuing sustainable economic activity rather than a conventional investment policy. The structure of ABS/MBS and the pools backing them might be intransparent which exposes the subfund to additional credit and prepayment risks (extension or contraction risks) depending on which tranche of ABS/MBS is purchased by the subfund. Money market investments are associated with risks of a money market, such as interest rate fluctuations, inflation risk and economic instability.

Past performance is not a reliable indicator of current or future performance. Performance data does not take into account any commissions and costs charged when shares of the fund are issued and redeemed, if applicable. The return of the fund may go down as well as up due to changes in rates of exchange between currencies. The value of the money invested in the fund can increase or decrease and there is no guarantee that all or part of your invested capital can be redeemed.

Interested parties may obtain the above-mentioned documents free of charge from the authorised distribution agencies and from the offices of the fund at 11-13 Boulevard de la Foire, L-1528 Luxembourg. Refer for more information on the fund to the latest prospectus, annual and semi-annual reports as well as the key investor information documents ("KIID"). These documents may also be downloaded from our website at vontobel.com/am, the representative in Switzerland: Vontobel Fonds Services AG, Gotthardstrasse 43, 8022 Zurich, the paying agent in Switzerland: Bank Vontobel AG, Gotthardstrasse 43, 8022 Zurich. The funds authorised for distribution in the United Kingdom and entered into the FCA's temporary marketing permissions regime can be viewed in the FCA register under the Scheme Reference Number 466625. The fund is authorised as a UCITS scheme (or is a sub fund of a UCITS scheme) in a European Economic Area (EEA) country, and the scheme is expected to remain authorised as a UCITS while it is in the temporary marketing permissions regime. Glossary

Benchmark

An index that is used to measure the performance of an investment fund with the purpose of tracking the return of such index or of defining the asset allocation of a portfolio or of computing the performance fees.

Beta

A measure of sensitivity - given as the average percentage change in the price of a fund when the market (benchmark) rises or falls by 1%. A value over (under) 1 means that on average the fund exhibits more (less) volatility than the benchmark. The figure is calculated on a 3-yearly basis.

Duration (Modified Duration)

Duration is an indication of how much a bond's price could be affected by a change in interest rates.

Effective Duration

Is a measure of the potential impact on a bond or portfolio price of a 1% change in interest rates across all maturities.

Hedging

Where a Class of Shares is described as hedged ("Hedged Share Class"), the intention is to hedge the Net Asset Value in the Reference Currency of the Sub/Fund into the Currency of the Hedged Share Class.

Information ratio

The information ratio (IR) is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns

Jensen's Alpha

Yield indicator. If the average return on a security or portfolio is larger than its expected return, the alpha is positive. If the average return is smaller than expected, the alpha is negative.

Management Fee

Is a fee which covers all costs relating to possible services rendered in connection with investment management and distribution. Please refer to the fund's prospectus for a complete description.

NAV

The Net Asset Value (NAV) represents the value per share. It is calculated by dividing the total net asset value of the fund (the value of the fund's assets less its liabilities) by the number of shares outstanding.

Performance Fee

The payment made to an Investment Manager if certain performance levels are achieved (often over and above any levels set out in the investment objective) within a set time period. Please refer to the fund's prospectus for a complete description.

Reference Index

The difference to benchmark is that the reference index is not used for calculation of performance fees.

Sharpe Ratio

The Sharpe ratio indicates the additional reward per unit of risk compared to a risk-free investment. It reveals how much performance was achieved at what level of risk.

TER

The fees and incidental costs charged on the management of collective investment schemes are to be disclosed using the internationally recognized Total Expense Ratio (TER). This ratio expresses the sum of all fees and incidental costs charged on an ongoing basis to the collective investment scheme's assets (operating expenses) taken retrospectively as a percentage of the net assets

Tracking error

Measure of the deviation of the return of a fund compared to the return of a benchmark over a fixed period of time. Expressed as a percentage. The more passively the investment fund is managed, the smaller the tracking error.

Volatility

Volatility (or risk or standard deviation) is an indicator of the range of fluctuation of the annualized performance of a fund over a certain period.

Weighted Average Coupon (WAC)

The coupon is the annual interest rate paid by a bond issuer on the face value of the bond.

Yield to Maturity

The rate of return anticipated on a bond if it is held until the maturity date.

Yield to Worst

The lowest potential yield that can be received on a bond without the issuer actually defaulting. The yield to worst is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions are used by the issuer.
