Vontobel Fund - Emerging Markets Debt HI (hedged), EUR

Morningstar Rating as of 31.12.2021 ★★★

Marketing document for institutional investors in:
AT, CH, CL, DE, ES, FR, GB, IT, LI, LU, SG (professional investors)

Investment objective

This bond fund aims to generate the best possible investment returns over a full economic cycle, while respecting risk diversification.

Key features

The fund invests across emerging markets mainly in government and quasi-sovereign bonds of diverse qualities with different maturities in various hard currencies. In addition, the fund may have limited exposures to emerging market corporate bonds as well as emerging market currencies. The fund uses derivative financial instruments, primarily for hedging purposes.

Approach

The compact and agile investment team of experienced emerging market specialists focuses on spread optimization for a given level of risk. Based on in-depth research and using a proprietary valuation model, the portfolio managers continuously compare the levels of remuneration potential available across issuer qualities, countries, interest rates, currencies, and maturities within the investment universe to identify the most rewarding opportunities, which may be contrarian to mainstream views. To seize them, the team flexibly adapts the portfolio while keeping credit, interest rate and currency risks in check.

Glossary

Duration (Modified Duration) Duration is an indication of how much a bond's price could be affected by a change in interest rates. **Hedging** Where a Class of Shares is described as hedged ("Hedged Share Class"), the intention is to hedge the Net Asset Value in the Reference Currency of the Sub/Fund into the Currency of the Hedged Share Class. **Index** is a characteristic portfolio considered representative of a particular market or a portion of it, and serves as a performance measurement for such a market. An index, or combination thereof, used as reference for performance comparison, is then called "reference index". **Information ratio** The information ratio (IR) is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns. **Management Fees** a fee which covers all costs relating to possible services rendered in connection with investment management and distribution. Please refer to the fund's prospectus for a complete description. **NAV** The Net Asset Value (NAV) represents the value per share. It is calculated by dividing the total net asset value of the fund (the value of the fund's assets less its liabilities) by the number of shares outstanding. **Ongoing charges** Expresses the sum of the costs of running a fund on an ongoing basis, like management fee and various legal and operating costs. It is calculated retroactively over a period of 12 months as a percentage of the fund assets. When insufficient data is available, Ongoing Charges may be estimated using data of funds with similar characteristics. **Sharpe Ratio** The Sharpe ratio indicates the additional reward per unit of risk compared to a risk-free investment. It reveals how much performance was achieved at what level of risk. **Tracking error** Measure of the deviation of the return of a fund compared to the return of a benchmark over a fixed period of time. Expressed as a percentage. The more passively the investment fund is managed, the smaller the tracking error. **Volatility** Volatility (or risk or standard deviation) is an indicator of the range of fluctuation of the annualized performance of a fund over a certain period. **Yield to Maturity** The rate of return anticipated on a bond if it is held until the maturity date. **Yield to Worst** The lowest potential yield that can be received on a bond without the issuer actually defaulting. The yield to worst is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions are used by the issuer.
